## Toilet Tally Sheet

A challenge from Season 1 Episode 1

### Instructions

Place one of these tally sheets in each place where there is a toilet in your home. Leave a pen or marker close by. Ask each member of the family to make a tally mark in the correct column each time they flush the toilet.

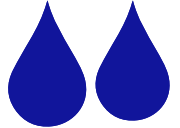

At the end of the week, add the tally marks in each column. Add the totals from each sheet in the house so that you have one total for full flushes and one total for half flushes. Multiply the total full flushes by 9 (litres of water) and the half flush total by (4.5).

Add the two column totals together to find out how many litres of water you use to flush the toilet each week.

Half Flush

Full Flush

$$\square \times 4.5 =$$

$$\square \times 9 =$$
